

Measurement Lab

- explain how you got the measurements
- have formulas on hand

Water Lab

- 4 properties of water

① (Stick together) (Stick to other things)
Cohesion / adhesion - they stick together & to other things

Polarization

② Good solvent - mix almost anything with it (ie: coffee)

③ Heat Capacity * water makes for a moderate climate

④ Less dense as a solid - ice

* water absorbs the heat but takes a long time for the temp of water to

change
* water can change states without changing temp
* water has to do w/ energy, not temp
