

# The Game influences behaviors

- To win, first you need a mate  
- Hopefully one with good characteristics.

## Our "disclaimer"

- People don't think about picking a good mate but your genes know. It's hardwired in your DNA.

## Territory!

You want to have the best territory - food and shelter.

## Additionally

- You declare your health.
- Your urine tells you how healthy you are. This is why you give a sample at the doctor.
- Dogs can id another dog by its urine. Great sense of smell. We use a dog's sense of smell to do things like find dead bodies and find bombs. There was a dog that can sense urine cancer.
