

Unit 10: Measuring Patient Safety

This material was developed by Johns Hopkins University, funded by the Department of Health and Human Services, Office of the National Coordinator for Health Information Technology under Award Number H240C000013.

Objectives

At the end of this segment, the student will be able to:

- Explain the attributes of an effective reporting system
- Examine the importance of standardized and structured health information
- Discuss how HIT can facilitate data collection and reporting for improving quality and patient safety

Component 12/Unit 10 Health IT Workforce Curriculum Version 2.0/Spring 2011 2

Exercise

Please answer each question with a score of 1 to 5. 1 is below average, 3 is average and 5 is above average.

- How smart am I?
- How hard do I work?
- How kind am I?
- How tall am I?
- How good is the quality of care you provide?

4

Conceptual model for measuring safety

Component 12/Unit 10

Health IT Workforce Curriculum
Version 2.0/Spring 2011

5

Examples

- Structure measures: do you have a smoking cessation program
- Process measure: % of patients who receive smoking cessation education or time spent with patients
- Outcome measure: % of patients who quite smoking

Component 12/Unit 10

Health IT Workforce Curriculum
Version 2.0/Spring 2011

6

What can be measured as a valid rate?

- Rate requires
 - Numerator - event
 - Denominator - those at risk for event
 - Surveillance for events and those at risk
- Minimal Error
 - Random error
 - Systematic error

Component 12/Unit 10

Health IT Workforce Curriculum
Version 2.0/Spring 2011

7

Potential Biases

- Selection bias
 - example identifying sepsis patients
- Measurement bias
 - Definition of event
 - Definition of those at risk
 - Surveillance
 - Missing data
- Analytic bias

Component 12/Unit 10

Health IT Workforce Curriculum
Version 2.0/Spring 2011

8

Sources Variation in Safety measures

- True variation in Safety
- Variation in data
 - quality/definition/methods of collection
- Variation in case mix
- Variation historical rates
- Chance

Component 12/Unit 10

Health IT Workforce Curriculum
Version 2.0/Spring 2011

9

It is Ok to have non-rate measures

Self reported measures are generally not valid as rates

A common mistake is interpreting a non-rate measure as a valid rate

Component 12/Unit 10

Health IT Workforce Curriculum
Version 2.0/Spring 2011

13

How to get more valid data

- Structure data entry or data collection forms - clarify who what when where and how
- Pilot test entry to see if staff understand
- Train and evaluate competency
- Evaluate data quality (look at data)
 - Missing data, outliers, repeat values
- Ask if the consumer of the data believes it is valid and useful

Health IT Workforce Curriculum
Version 2.0/Spring 2011

14

Quality Report

- Generally present data over time in annotated run chart
- Clearly label x and y axis (usually time period)
- Select time period so that you have about 25 observations per time period
- Ask users of the data for feedback on making it more useful
