

## Component 8 Installation and Maintenance of Health IT Systems Unit 1b Elements of a Typical Electronic Health Record System

This material was developed by Duke University, funded by the Department of Health and Human Services,  
Office of the National Coordinator for Health Information Technology under Award Number 1U24OC000024.

---

---

---

---

---

---

---

---

### Typical Server Elements

- Types of servers:
  - Application server: computer on which the EHR/PM (Practice Management) application resides
  - Database server: computer on which the database software resides
  - Citrix or terminal server: computer that supports thin client network
- Application, database, and terminal services may reside on the same computer for small installations (<10 users)

---

---

---

---

---

---

---

---

### Server Software Elements of the EHR

- IOM: 8 Core Components
  1. Health information in database
  2. Results management
  3. Order entry and management
  4. Decision support
  5. Electronic communication/connectivity
  6. Patient support
  7. Administrative processes
  8. Reporting and population health management

---

---

---

---

---

---

---

---

## EHR Clients

- EHR systems make medical records available to multiple simultaneous users.
- Tablets, laptops, and PCs allow instantaneous access by healthcare staff as they move around health centers.
- Clients use application software to securely connect to and pull data from the EHR server to fulfill user requests.

---

---

---

---

---

---

---

---

## EHR Hardware – Defined

- Hardware is:
  - the physical components that make up a computer system.
  - necessary to make the computer work and run properly.

---

---

---

---

---

---

---

---

## EHR Hardware – Most Common

- Servers
- Workstations
- Laptops
- Tablets
- PDAs/smartphones
- Flat-panel monitors
- Scanners
- Printers
- Storage and backup
- Shredders
- Medical diagnostic and treatment items

---

---

---

---

---

---

---

---

## EHR Hardware – Servers

- The server(s) are the “home base” of the core EHR system, with components including:
  - Storage of patient database (index)
  - Real-time, dynamic compilation of patient information from varied sources
  - Modules for parsing user requests
  - User management tools
  - Customization tools

---

---

---

---

---

---

---

---

## EHR Hardware – Servers

- Picking the right server
  - Consult your IT staff, hardware & EHR vendor(s), and/or consultant to determine the hardware specs required for your organization.
  - Important items to consider include:
    - Reliability
    - Performance
    - Scalability

---

---

---

---

---

---

---

---

## EHR Hardware – Servers

- Storage requirements depend on EHR/PM application, volume of scanned documents
  - Check with your EHR vendor.
  - Rule of thumb: 5 GB/year/provider

---

---

---

---

---

---

---

---

## EHR Hardware – Servers

- Purchase considerations
  - Brand
    - e.g. Dell vs. “white box”
  - Operating system (OS)
    - e.g. Windows XP
  - Processors
    - e.g. 2.4 GHz Xeon

---

---

---

---

---

---

---

---

## EHR Hardware – Servers

- Purchase considerations (cont'd)
  - RAM
    - e.g. 1 GB
  - Hard drive configuration
    - e.g. RAID 5
  - Network card
    - e.g. 1 GB/second
  - Accessories: monitor, keyboard, CD/DVD drive, UPS (Uninterruptible Power Supply)

---

---

---

---

---

---

---

---

## EHR Hardware – Servers

	Internal	External/Hosted
Cost	Higher initial costs	Monthly fees
Management	Need staff to implement & manage server(s), perform software/hardware maintenance & backup	Dependent on vendor for scheduled maintenance
Power	Capable of utilizing full power of server	Often share resources with other institutions
Connectivity	Control speed & connectivity to server(s)	Remote locations, so connectivity may be shared with other customers, reducing speed

---

---

---

---

---

---

---

---

## EHR Hardware – Clients

- Fixed workstations
  - Connected to server via wired network
  - Strategically positioned throughout work environment to facilitate convenient access
  - Most commonly used and often already in place
  - Economical

---

---

---

---

---

---

---

---

## EHR Hardware – Clients

- Mobile computers
  - Laptops: physical keyboards; input generally via keyboard or mouse/touchpad, no touch option
  - Tablets: data entry & navigation including touch input, via stylus / electronic pen or finger
    - Slates
    - Convertibles
    - Booklets
  - Connect wirelessly to the network
  - Use rechargeable batteries

---

---

---

---

---

---

---

---

## EHR Hardware – Clients

- Mobile computers (cont'd)
  - Advantages
    - Additional mobility compared to workstations
    - Save time
    - Can be cheaper if additional infrastructure such as ports are needed
  - Disadvantages
    - Typically more expensive than fixed workstations
    - Subject to theft
    - Easily broken
    - Require additional support, cleaning, maintenance

---

---

---

---

---

---

---

---

## EHR Hardware – PDAs and Smart Phones

- Personal Digital Assistants (PDAs) and Smart Phones combine computing and networking / cellular features into a personalized unit.
  - Like tablets, mostly pen-based, using stylus for input rather than keyboard
  - Allow users to access patient data remotely, from any location with network connectivity
  - Similar advantages & disadvantages as laptops & tablets
  - May require additional hardware/infrastructure resources

---

---

---

---

---

---

---

---

## Network

- Collection of computers and devices connected by communication channels
- Allows users to communicate and share resources with other users
- Important terms
  - Ethernet
  - LAN (Local Area Network)
  - WLAN (Wireless Local Area Network), WiFi
  - WAN (Wide Area Network)
  - Point-to-point or fractional T1
  - Bandwidth
  - VPN (Virtual Private Network)
  - Firewall

---

---

---

---

---

---

---

---

## Local Area Network (Corporate Offices, NYC)

---

---

---

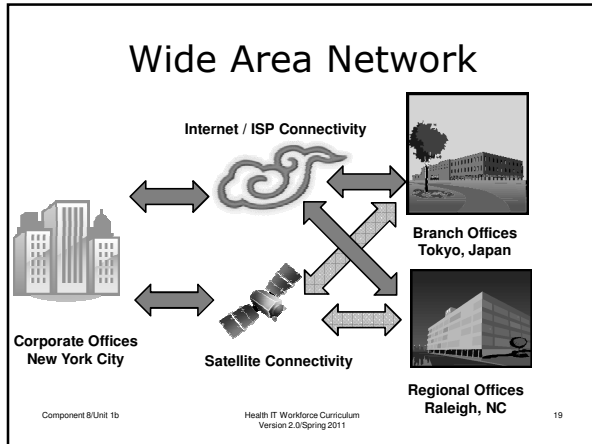

---

---

---

---

---

---

---

---

---

---

---

---

---

---

---

## Network – Assessing Usage

- Must be able to support data requirements of EHR application
- Insufficient capabilities will degrade application performance and increase risk of user rejection

Component 8/Unit 1b Health IT Workforce Curriculum  
Version 2.0/Spring 2011 20

---

---

---

---

---

---

---

---

---

---

## Network – Assessing Usage

- Considerations
  - How many users will need simultaneous access to the network?
  - Bandwidth requirements of the EHR system (per vendor)
    - Special bandwidth needs of scanning equipment or other medical equipment
  - Sufficient connectivity between internal and remote resources such as satellite facilities

Component 8/Unit 1b Health IT Workforce Curriculum  
Version 2.0/Spring 2011 21

---

---

---

---

---

---

---

---

---

---

## Network – Assessing Usage

- Conduct a wireless connectivity survey
- Explore remote connectivity options, including VPN (Virtual Private Networks)

---

---

---

---

---

---

---

---
